

CLAIMS

1. (Original) A display comprising:
 - a circuit board;
 - a display panel electrically coupled to said circuit board in face-to-face abutment substantially along a plane; and
 - an electrical connection including a first contact on said circuit board, a second contact on said display panel, and a conductor coupling said first and second contacts and extending generally along said plane.
2. (Original) The display of claim 1 wherein said electrical connection is a surface mount connection including solder balls.
3. (Original) The display of claim 2 wherein said solder balls couple to the contact pads on one of said display panels or circuit boards.
4. (Original) The display of claim 3, said display panel including column electrodes and said conductor including a metallization coupled to said second contact on said display panel and extending to a third contact which contacts a column electrode.
5. (Original) The display of claim 4 wherein said column electrode is formed at least in part of indium tin oxide.
6. (Original) The display of claim 5 including a plurality of redundant third contacts to said column electrode.
7. (Original) The display of claim 6 including a plurality of second contacts aligned in a column parallel to said column electrode.

8. (Original) The display of claim 7, said display including pixels, wherein an electrical connection is made from said second contacts to said column electrode for every other pixel along the length of said column electrode.

9. (Original) The display of claim 8, said display including an edge, and including a zone, adjacent to said edge, free of electrical connections.

Amend. 10. (Original) The display of claim 1 including a row electrode and a plurality of electrical connections from said second contacts to the row electrode, said second contacts that couple to said row electrode being arranged parallel to said column electrode.

Claims 11-18 (Canceled)
